Apple IIGS 3.2 System: ATLOAD.0 Conflict

=====

This article last reviewed: 18 August 1988

When installing the new System 3.2 on an existing ProDOS disk (such as a hard disk), make sure to remove the ATLOAD.0 file from the /SYSTEM/SYSTEM.SETUP folder.

There appears to be a conflict with this file and the new AppleTalk setup files. If this file is not removed, the system will drop into Monitor mode during the boot process.
