

# NOTE:

## Instrument Designer Data Files

There are several additional folders that are found on your *Instrument Designer Program* disk that contain data files. There are two types of data folders on the disk as shown below:

Instruments

Instrument folder - This folder contains files that are called *Instrument Files*. These data files store all the information about a sound such as the sound wave, envelope, relative pitch, etc.

### WaveFile folder

Inside the Wave file folder are three folders dividing the sound waves into three categories. The three categories are:

**InstWaves** containing Instrument sound waves, **PercWaves** containing Percussion sound waves, and **StrangeWaves** containing miscellaneous sound waves. These data files store only a sound wave and can be loaded

into the *Instrument Designer* with the **Get Wave File** option on the **File** menu.
